Personal Site Overview: Inspired by Gwern, GSD, MIT Media Lab

---

🧠**Design Philosophy**

Form follows clarity. This site is a calm, minimalist digital studio — equal parts thought archive, personal lab notebook, and philosophical sketchpad. It draws from Gwern.net's hyperlink depth, Harvard GSD's editorial structure, and the MIT Media Lab's experimental clarity.

Core Principles: 1. **Content over container** – Words are primary. Design supports clarity, not flash. 2. **Editorial, not bloggy** – Timeless over trendy. Structured like an academic archive. 3. **Minimal, not sterile** – White space breathes. Typography flows. Purpose > polish. 4. **Architectural thinking** – Layout and rhythm emulate the studio/gallery feel. 5. **Legible evolution** – The site grows over time like a notebook or studio wall. 6. **No artificial urgency** – No likes, comments, or engagement baits.

👉**Launch Structure (Lean V1)**

Path	Purpose	Notes
`/`	Landing page with name, short intro, and links to key sections	Static but expressive
`/history`	Personal + professional journey — a narrative of growth and pivots	Combine bio, resume, and story
`/projects`	Showcase of built things — zines, hardware, AI tools, creative systems	Include tech stack, impact, links
`/library`	Books, essays, thinkers, tools that shaped you	Light annotations or highlights
`/philosophy`	Design & life ethos — your guiding principles	Include full design philosophy here

---

Visual + Technical Stack - **Stack:** Next.js + Tailwind CSS - **Style:** Serif-forward, high-margin layout, monochrome with minimal accent - **Inspiration Sources:** - Gwern.net - Harvard GSD - MIT Media Lab - Columbia GSAPP

Next Steps Suggestions: - Scaffold folders + routing for the 5 pages - Build `/` and `/projects` layout first - Create base CSS with a typographic system (serif, spacing scale, link color) - Add static Markdown or MDX support for easy editing

---

Stretch Ideas for Future: - Add `/log` (dev updates, diary) - Add `/now` (what you're exploring or building) - Interactive `index` or cross-linked zettelkasten-style graph - Print/export modes (PDF-ready essays or zines)

This is a system for showing what you know, not shouting. A space that lets ideas stretch their legs.
